

For immediate release:

To provide more HCBS agencies with award winning agency management software, Cashe Software, makers of Pavillio, are expanding operations into Wisconsin. With nearly 400 agencies representing 10,000 clients already using Pavillio in Minnesota, the Cashe team is excited to bring this level of expertise to Wisconsin.

As Electronic Visit Verification (EVV) becomes more prevalent and eventually mandated by the state of Wisconsin, Cashe Software and Pavillio seek to be at the forefront of helping providers be more efficient and compliant with state regulations.

President of Cashe Software, Praba Manivasager, said of the expansion:

"After 15 years in Minnesota, we are excited to offer our flagship product to Wisconsin providers and help them streamline their agency operations. Wisconsin provides a unique opportunity to bring Cashe's software and experience to another state and will prime us for further expansion."

"I am beyond excited to bring Pavillio to agencies in Wisconsin. The software that we offer is one of a kind that enables agencies to spend more time focusing on providing care rather than managing compliance checklists and documents. The implementation team brings a wealth of experience in successfully implementing agencies in 5-8 weeks from kick-off," said Christine Evenson, Senior Manager of Customer Success.
